Outline

01 **Problem Statement**

02 **Project Objectives**

03 **Significant Contribution**

04 **System Overview**

05 **Objective Evaluation**

06 **Demo**

Problem Statement

- 01 285M visually impaired worldwide, predominantly in low-income settings
- 02 Impairments reduce independence, increase caregiver reliance
- 03 Indoor navigation for visually impaired individuals

Project Objectives

MAIN GOAL:

Develop an indoor navigation and mapping system to assist individuals with vision impairment.

To Create a Cross-Platform Application

- Ensure compatibility with both Android and iOS.
- Broaden user demographic.

To Develop an Indoor Mapping Component

- Provide map customization and information features.
- Offer sound and vibration assistance

To Ensure Accessibility Function Compatibility

- Integrate with TalkBack (Android) and VoiceOver (iOS).
- Reduce the time needed for users to become familiar with the application's features.

Contribution

- 01 Advancing assistive technology for visually impaired individuals

- 02 Real-world effectiveness

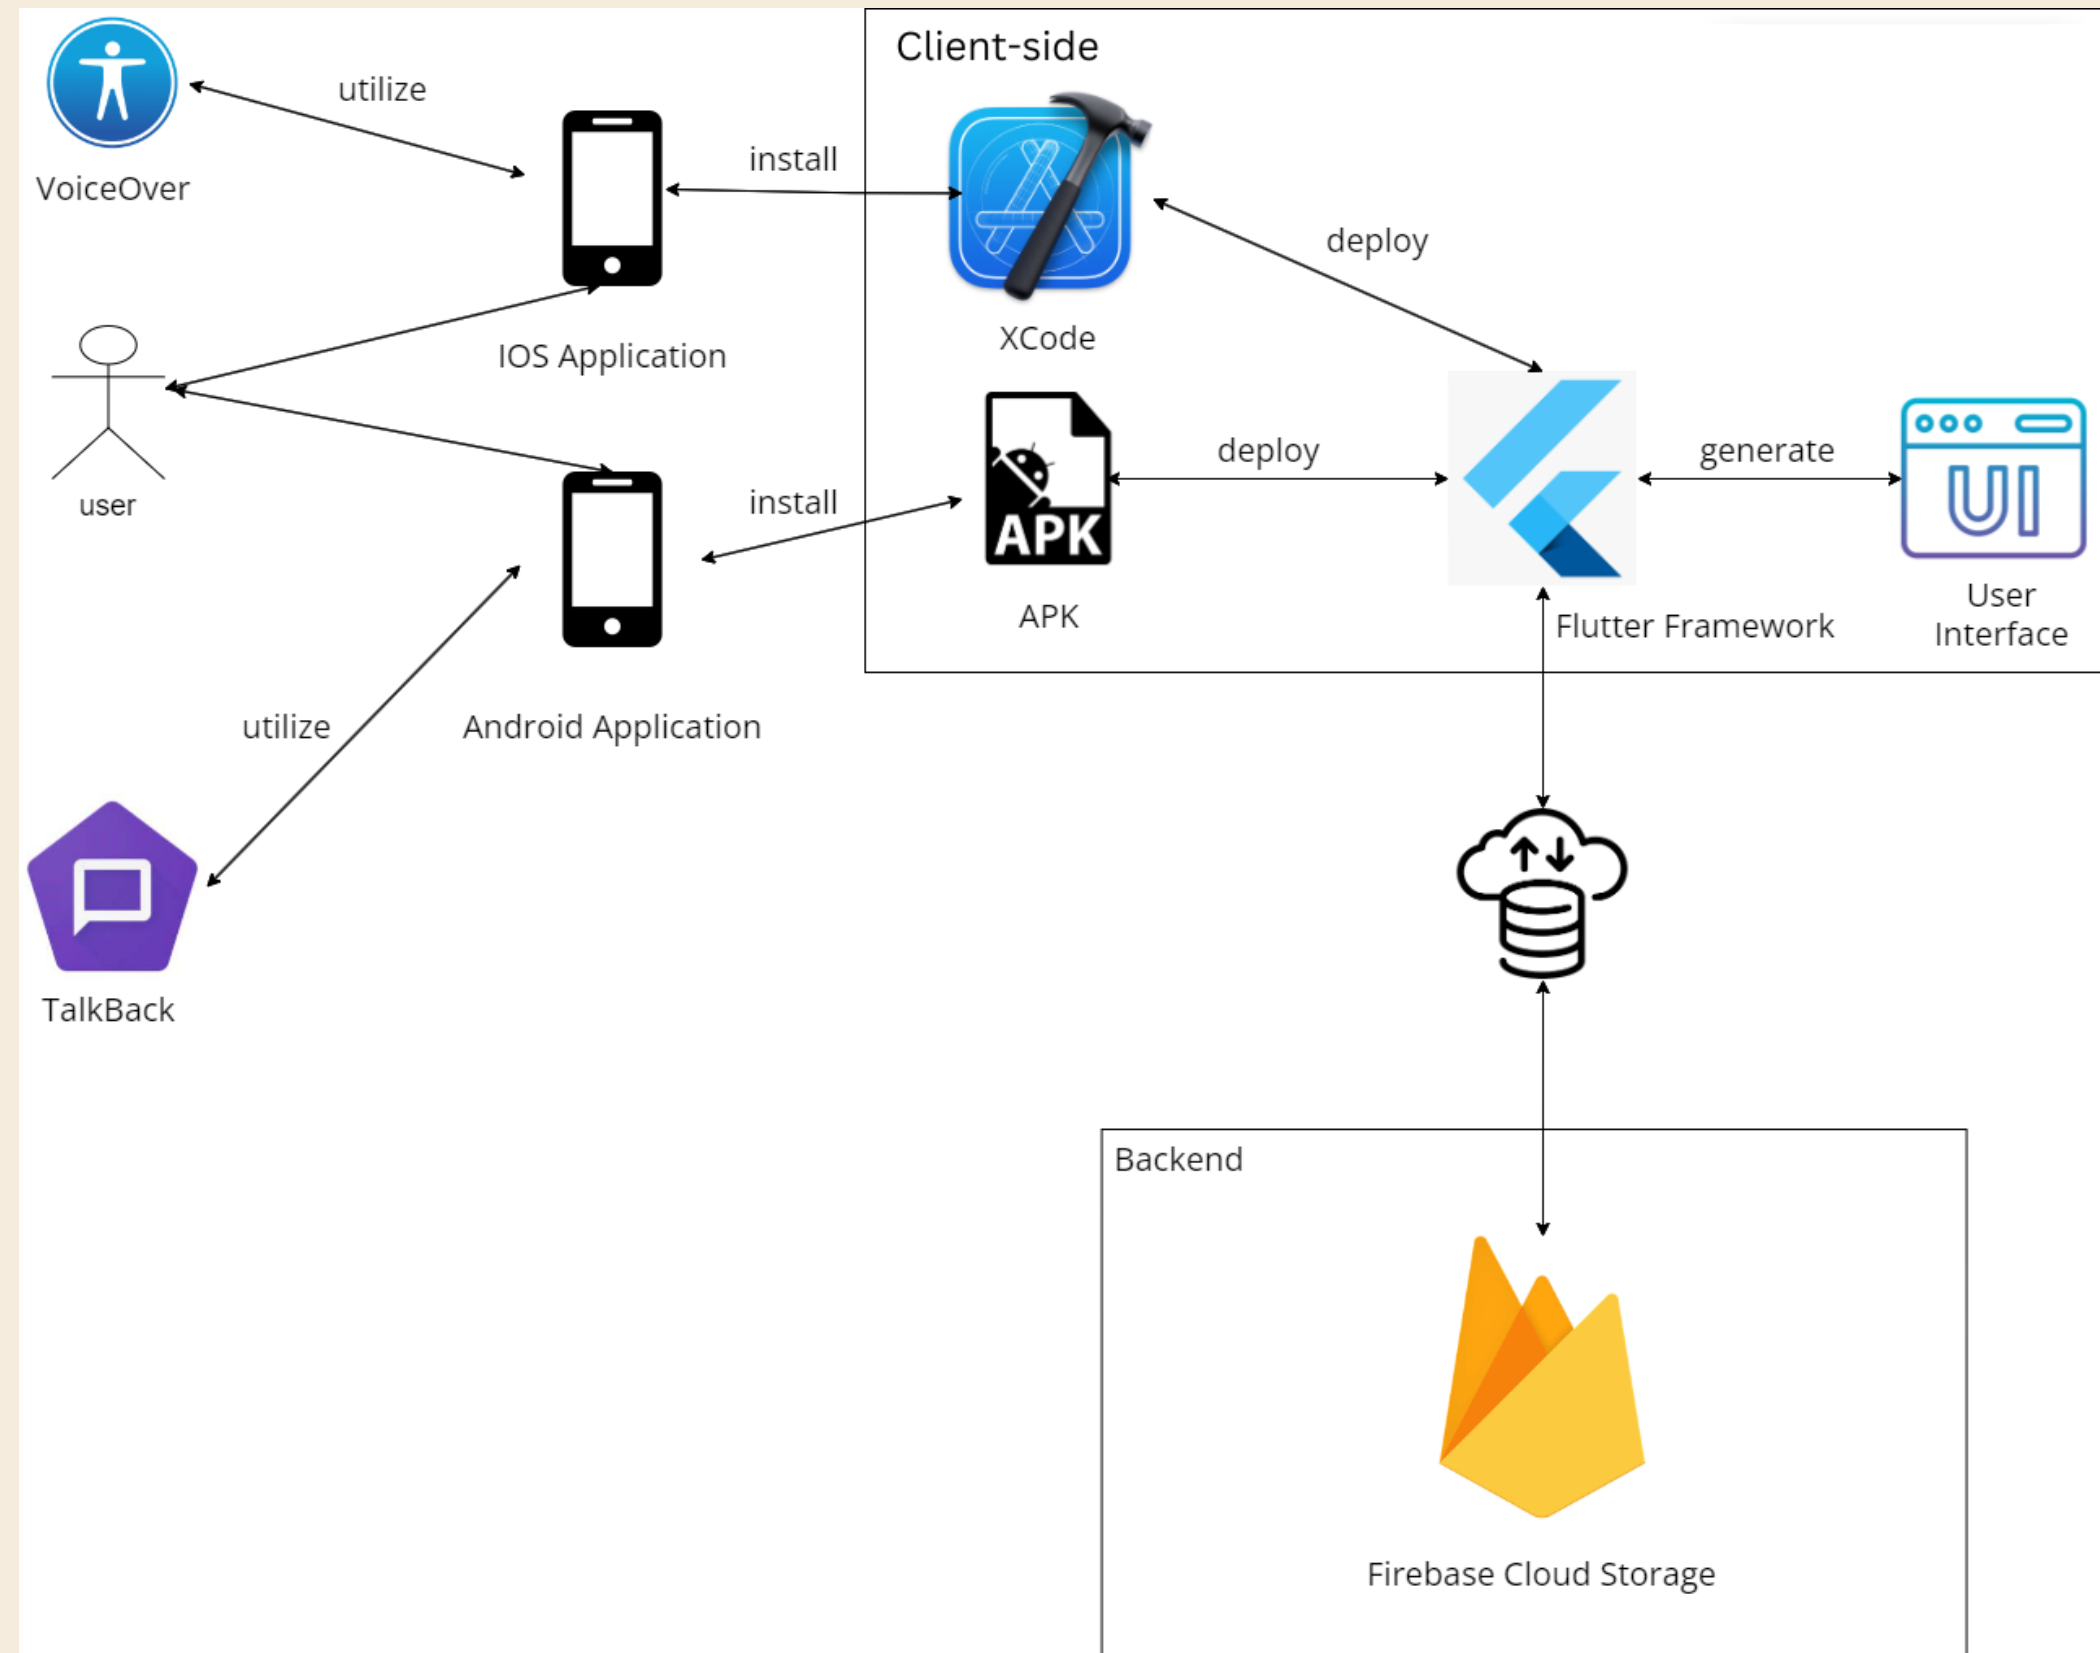

- 03 Enhances independence, quality of life, and safety

- 04 Reduces burden on caregivers and family members

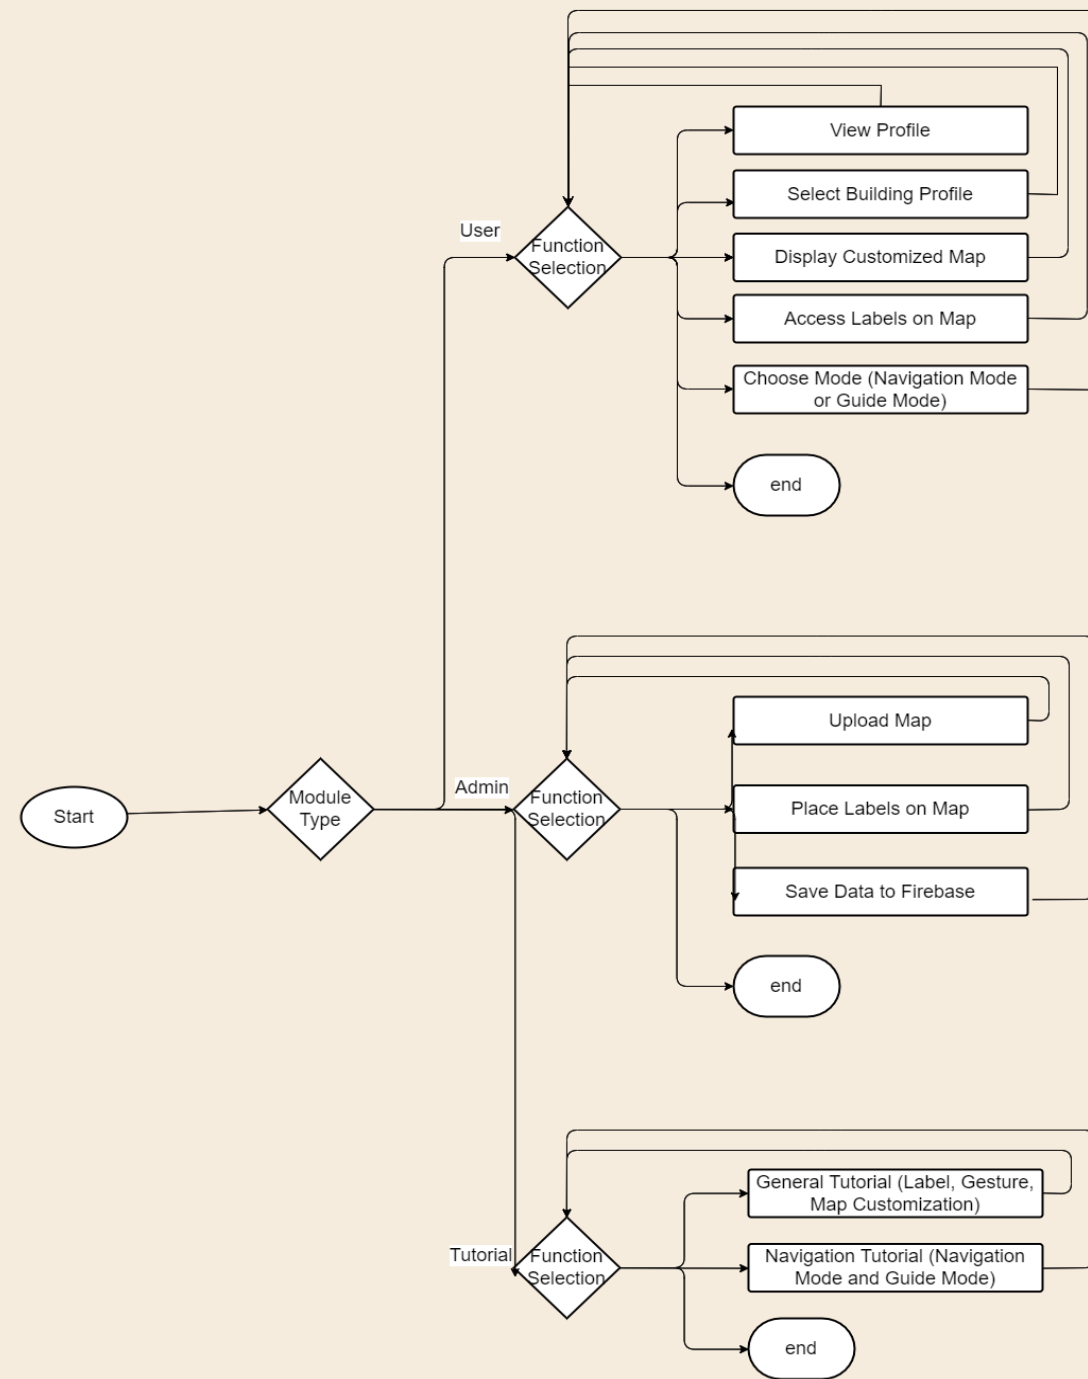

- 05 Potential for expansion to various structures and settings

Objective Evaluation

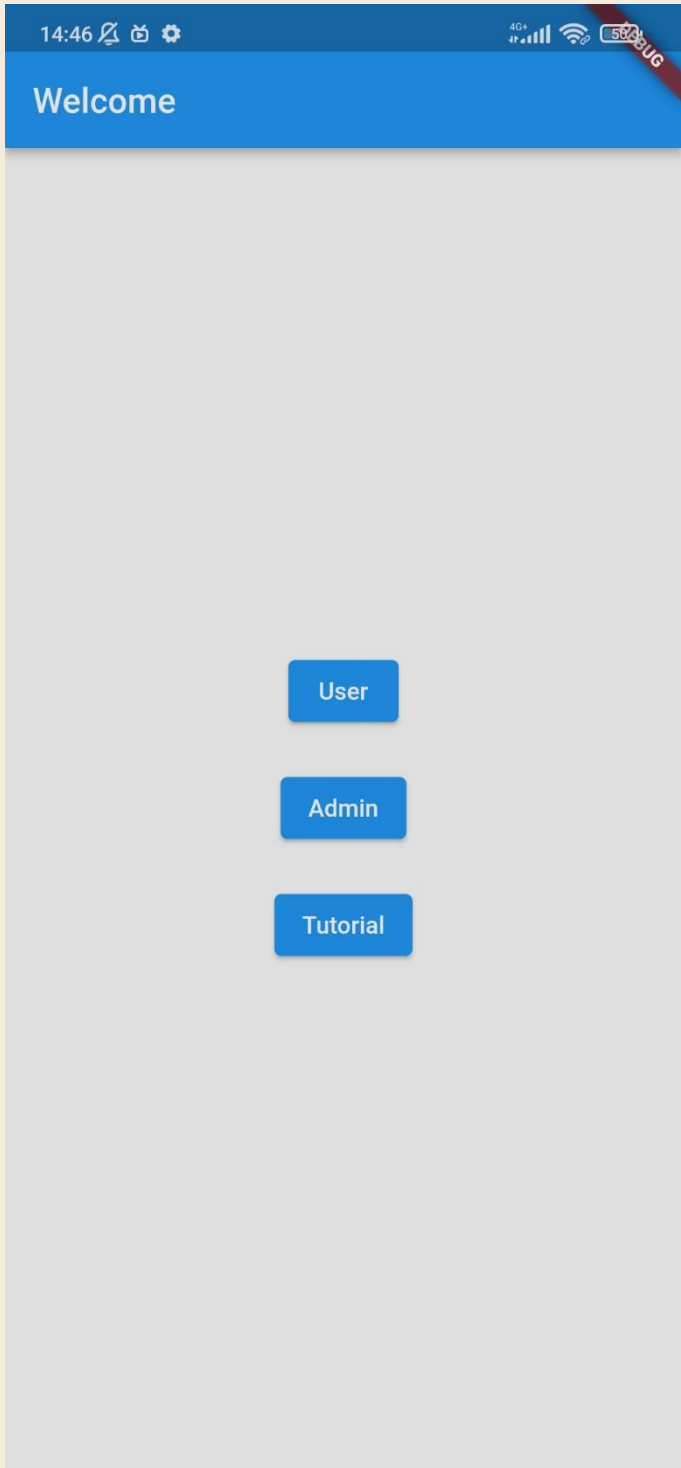

Objective Evaluation

To Create a Cross-Platform Application

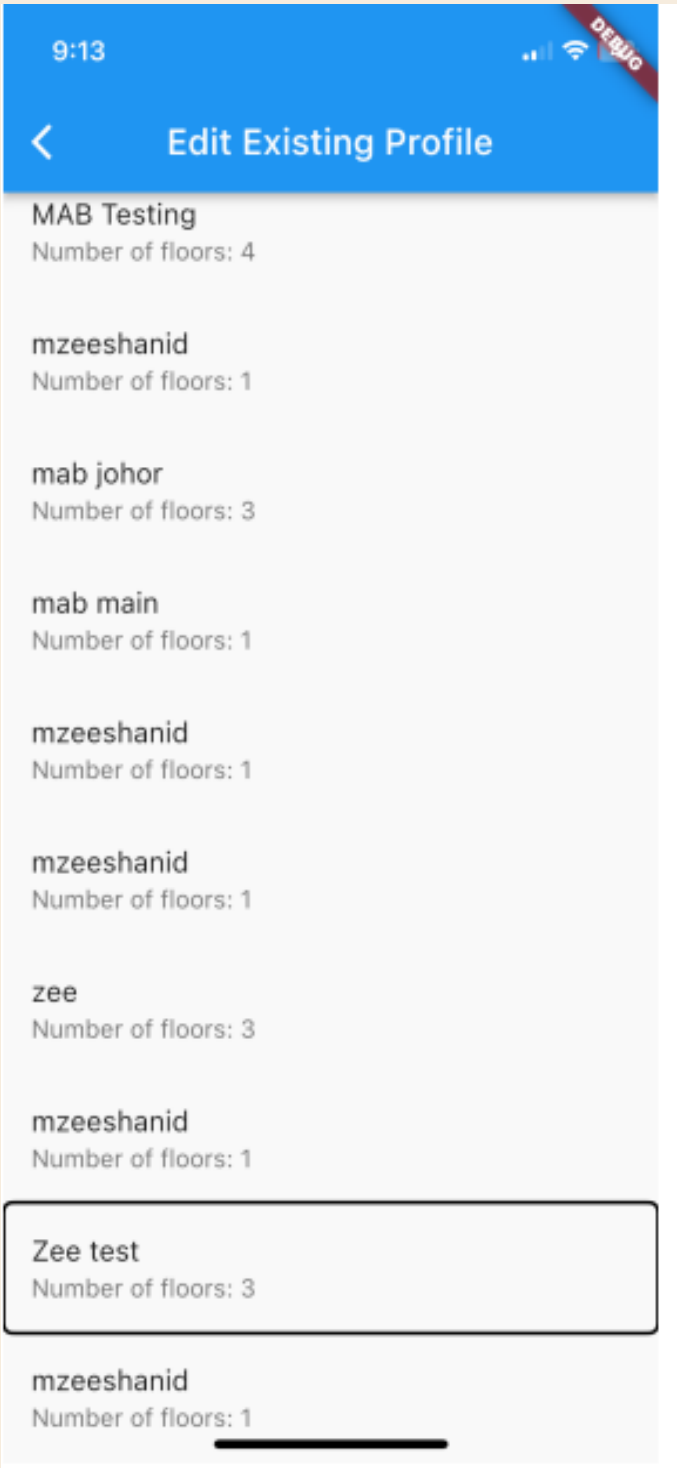

To Develop an Indoor Mapping Component

To Ensure Accessibility Function Compatibility

To Create a Cross-Platform Application

Android

IOS

To Develop an Indoor Mapping Component

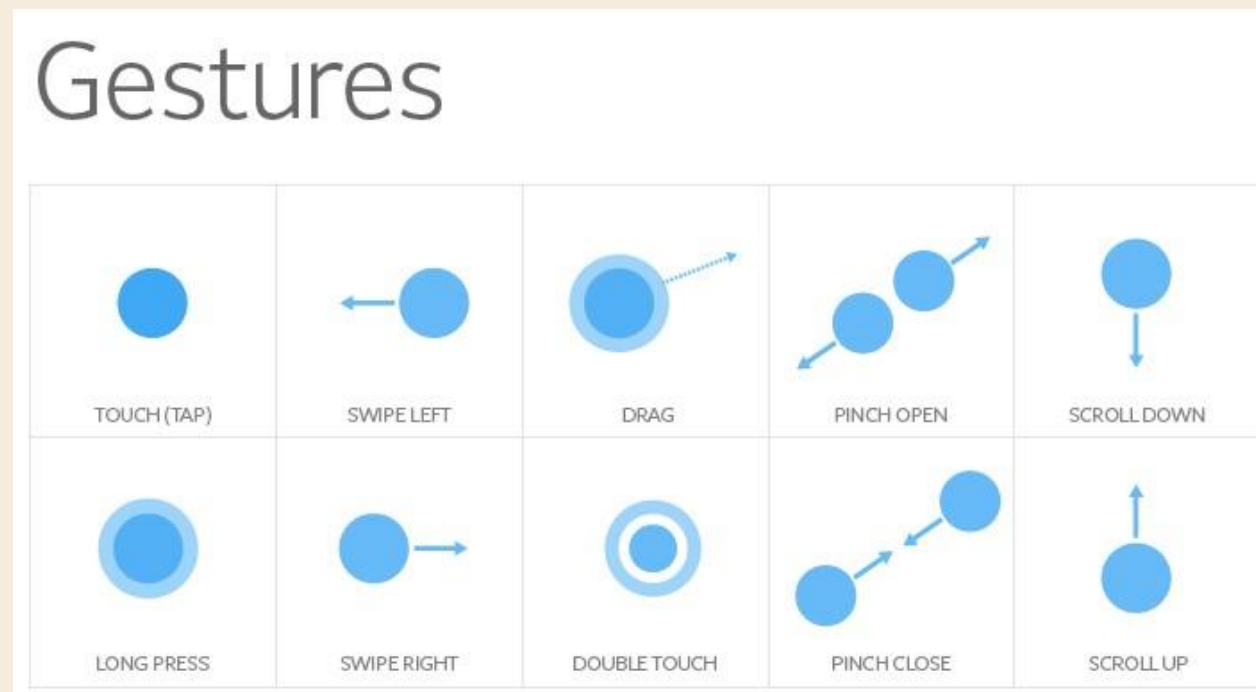

Function	Evaluation	Criteria
Map Customization	User is able to upload, edit and load the map. Create, edit, remove the labels on the map. Besides, user is able to create, choose, edit different building profile.	Accept
Map Navigation	User is able to navigate the customized map. The two modes and the hint(vibration and audio) are functioning, user can use customized gesture during the navigation.	Accept
Tutorial Module	User is able to learn how to use the application by using the tutorial module.	Accept

To Ensure Accessibility Function Compatibility

Module	Evaluation	Criteria
Admin Module	The Admin Module is not compatible with Accessibility Function.	Not Accepted
User Module	The User Module is not compatible with Accessibility Function.	Not Accepted
Tutorial Module	The Tutorial Module is compatible with Accessibility Function.	Accept

Challenges

GestureDetector

Accessibility Function

Proposed Solution

**Temporarily Disable Accessibility Function
With the help of**

Tutorial Mode

Customized Gesture

Application Demo

Q&A
